

FPS BOOSTER 1.2

-Disclaimer-

You must run the provided files as administrator or it will not work as intended. I (MRxSNIPES2) am not responsible for what may happen as a result of using this script. This script was designed for Windows 7 and above (8 / 8.1 / 10).

Use this at your own risk.

-About-

This script works on all GTA V version. Be sure to specify your GTA V directory! All files must be in the same folder to work properly. **If you have your game installed in a different directory other than the default you must specify it in the .BAT file (retail_launcher).**

NOTE: The FPS booster was made to help players get more FPS out of their hardware. This can be useful on any computer. This also comes with a settings.xml and documentation to help users get better frames on lower end computers and to better understand how this works and how you can edit this to your needs.

Use in Grand Theft Auto Online: This tool does not modify the game at all so you can still play online. This tool just stops unneeded services and programs and set the game's priority to a higher setting.

Tested with:

- Settings_dx10.xml – Windows 7 Ultimate – Nvidia GeForce 8600 GT 512MB Vram – 3 GB RAM – AMD Athlon 7550 Dual-Core Processor (**Boosted FPS from 8-11 to 15-24**)
- Settings_dx10.xml – Windows 7 Home Premium – Pentium Dual-Core CPU ES400 2.7 GHz – 4 GB RAM – ATI Radeon 4300/4500 Series 512MB VRAM (**Boosted FPS from 3-6 FPS to 10-15 FPS**)

Don't forget to check out <https://www.gta5-mods.com/misc/super-low-settings-working-title>

-How does it work?-

These simple scripts will stop unneeded services to help increase your FPS in GTA V. When the game is closed, all services will automatically be restarted.

-How to use-

1. Run START_GTAV.bat
2. The batch file will end unnecessary processes and lunch GTA V.
3. Play the game!

4. Once you exit the game all processes that were previously ended will be restarted.

-How to use Commandline.txt-

1. Drag and drop the provided commandline.txt into the root directory of your Grand Theft Auto V installation.
2. You can edit the commandline.txt and tweak any features you desire. Notepad and Notepad++ are compatible.

-Change log-

- **1.2.1** - Fixed bugs with USER_STOP_SCRIPT and EXTRA_SCRIPTS, thanks to R2Guy, fixed and added more options for ALL_LAUNCHER.
- **1.2** – Added a new script to give the user the option to choose what services and programs to stop. Added a new launcher for custom game launchers. Added more error checks. Added a few hidden settings in extra_scripts. Added the option to change the services and programs in the extra scripts. Fixed extra_scripts not being able to detect UAC setting when it is turned off. Updated readme and other info that was not updated in **1.1**.
- **1.1** – Added saving answers. Added error checks to let you know of errors. Updated extra_scripts. Dropped Non_Steam_GTAVLauncher and START_GTA_VWITH_OUT_STOPING_ANY_THING (will not be updated). Added a list of CPU speed in documentation. Added the options to choose the priority of the game. Added an OS check to only show change theme on Windows Vista and 7. Added restore theme for Windows 7. Added an option to restart GTA V when you have exited the game.
- **1.0** – Fixed missing code that caused Windows Update to not restart. Fixed overlapping I/O error from the STOP and RESTORE scripting by adding a 1 second wait time for each service being started/stopped. Fixed GTA5.exe being set to high priority and not just above normal. Fixed RETAIL_LAUNCHER not being able to CD to your GTA V folder (you may still need to change it). Cleaned up the read me. Cleaned up the folder. Updated the settings.xml. Updated documentation. Updated SPEED_BOOSTER. Updated RETAIL_LAUNCHER. Updated and cleaned the standalone Non-Steam_GTAVLauncher. Updated Restore RESTORE_SCRIPT to not open a new window for each service and added /y so if it asked you if you wanted to start it, it will just do it. Added more services and programs to stop. Added windows 8/8.1 and 10 services and programs to the list. For Windows Vista and Windows Seven, added a script to change the theme to Windows classic for more FPS but does not yet change it back yet. Added script to display video card name, export msinfo and dxdiag, change power settings and more (this script

can be found in the standalone_scripts folder). Added OS check and architecture check before running the script. Added a Q&A text file. Added check for permissions and prompt to allow you to run as admin, thanks to BatchGotAdmin.

- **0.9.3.4** – Grammar fixes
- **0.9.3.2** – Added commandline.txt
- **0.9.3** – Added support for non-steam
- **0.9.2** – Added screenshots to the documentation folder of NVIDIA and ATI/AMD control panel
- add some new stuff and moved the scripts to the script_files folder
- added a new script to try to help users with low RAM
- **0.9.1** – Added a changelog, Fixed the pdf file and changed to timer from 60 to 120 to fix the slow Social Club start due to the process being set to low priority.
- **0.9** – Added the documentation folder
- **0.8** – Removed read-me.txt for PDF
- **0.7** – Added the /y to one of the services to stop
- **0.6** – Added the wait for gta5 to close before starting restore script
- **0.5** – Added stop and restore scripts to the start script
- **0.4 to 0.1** – Started working on it and adding a lot to the script

-Misc-

Feel free to look in the other bat files and see what is in there. You can find useful documentation and other goodies. The scripts are highly customizable and can be tweaked to your liking.
